DATE: **October 16, 2006**

SUBJECT: **SOFTWARE VERSION CANNOT BE UPGRADED TO 1.10**

MODEL: **BKM-15R**

SERIAL NO:

BKM-15R   2,000,001–2,000,110

DESCRIPTION

BKM-15R software cannot be upgraded from V1.01 to V1.10 using the memory stick. Operation is normal after the upgrade; however, the software version displayed on the STATUS (2/2) menu is still "1.01.00."

This occurs because the file attribute of controller software "BKM15RbI3" is set to Writing Unavailable. As a result, no new version files can be written. Reset the file attribute as described in the following procedure.

RESET PROCEDURE

1. Connect a straight-type Ethernet cable between BKM-15R and the PC.

2. Set the NETWORK switch on the rear of BKM-15R to PEER TO PEER.

3. Connect the PC and BKM-15R with terminal software, such as HyperTerminal.

   Host Address: **192.168.0.100**
   Port Number: **23**
   Connecting method: **TCP/IP**

   NOTE: Set the IP address of your PC to 192.168.0.xxx in advance. (xxx cannot be 100.)

4. Enter the following user name and password:

   User name: **super**
   Password: **user**

5. When the Super prompt is displayed, enter the following attribute command:

   attr /flb0/usercmd/BKM15RbI3 -w

   NOTE: Check that the following appears on the next line after entering the command:

   -----e-r-e-r-ewr /flb0/usercmd/BKM15RbI3

6. Reset the connection of the BKM-15R LAN terminals and the NETWORK switch.

7. Upgrade BKM-15R.

CONFIRMATION

Confirm that software is V1.10.00 from STATUS (2/2) > CONTROLLER STATUS.
