Sony **SOFTWAREPLUS**® Center

Fax: **816-880-6854**

Call: 800-538-7550 → **Option 5**

Mail: Sony **SOFTWAREPLUS**® Center

8281 NW 107th Terrace

Kansas City, MO 64153

Customers outside the United States: *Please order parts from your usual supplier.*

PROGRAM IMPROVEMENTS

V1.10

- In signals with a vertical frequency of 48 Hz to 50 Hz, flicker and vertical jitter are reduced by driving the LCD panel synchronously.

- When a PAL/NTSC signal with a horizontal frequency of 15 kHz is input, picture sharpness is enhanced by changing the coefficient of the interpolation of vertical picture elements.

- When using the BKM-120D through-out terminal, the through-out signal is no longer disturbed when the signal is switched.

- In LMD-151MD, when receiving a 720P signal with BKM-129X, picture disturbance no longer occurs if the aspect ratio is switched.

DPMO01-033, DPMO01-042

V1.01

- When setting the menu to German, all menu items are now displayed properly.
- When entering POWER SAVE mode for approximately the 14th time, picture disturbance no longer occurs.

INSTALLATION PROCEDURE

For detailed instructions on how to upgrade the software, see Technical Bulletin 30-2001-190, *Software Upgrade Procedure*.
