## 1.0 DESCRIPTION

The A4000T computer is a new member of the Amiga 4000 family, based on the AA chip set. It is housed in a tower case with a separate keyboard. Expansion capabilities are provided via five internal Zorro II/III expansion connectors, four PC/AT slots, two video slots, and a CPU slot.

A functional block diagram is shown in Figure 1.

## 1.1 ELECTRICAL SPECIFICATIONS

### 1.1.1 CPU

The CPU for the A4000T is contained on a separate CPU card (occupying the CPU slot) which can be used with a 25 Mhz 68040 or 68LC040 processor. When a 68040 processor is used, it resides in a PGA socket. Future CPU cards may contain RAM and/or other expansion devices/processors.

### 1.1.2 FAST RAM

- Up to 16 Megabytes
- 4 72 pin SIMM sockets
- 32 bit CPU interface
- Page or Static Column mode
- 80 nsecs

The SIMMs are 72 pin JEDEC standard. Many 72 pin SIMMs are 36 bits wide. This machine requires only 32 bits of data. If a 36 bit SIMM is used, then the extra 4 bits are simply ignored.

FASTRAM is controlled by the same RAMSEY chip used in the A3000 and A4000. RAMSEY was designed to terminate cycles via \*STERM.

BURST mode is functional for FASTRAM. It is desirable to have this turned on. The test for static column DRAMs should be left in the ROM, and the BURST bit turned on just as is done with the A3000. However, the test for static column DRAMs must be done differently. Instead of writing four longwords with the static column bit set, and then reading them back with it off, the four longwords should be written with the bit set off, and then read back with it turned on. This is necessary because JEDEC standard SIMMs do not make use of an output enable (\*OE) pin for the DRAMs. When static column mode is turned on, all writes to the DRAM are done as late writes. Without the \*OE pin, the SIMMs cannot do late writes. The test will fail, indicating the correct result, but more significantly the data being written to the DRAMs will collide with data coming out of them, which is undesirable. Static column SIMMs must be custom made. One of the no connect pins will be assigned to act as the \*OE pin. Only after it is determined that the DRAMs are the static column type should a write to DRAM in static column mode EVER be allowed.

If static column DRAMs are installed, PAGE MODE operation is functional as well (when the bit is turned on). FAST RAM SIMM types usable with the A4000T are:

1MB SIMM = 256k x 32/36  
4MB SIMM = 1M x 32/36

Double-sided SIMMs (2MB or 8MB) may be used in SIMM S351 and S353. The second side of the SIMM is seen as the electrical equivalent of another single-sided SIMM installed in SIMM slots 2 and 4 respectively. However, the maximum memory addressed is the same whether four single-sided or two double-sided SIMMs are used (4MB with 1MB or 2MB SIMMs or 16 MB with 4MB or 8MB SIMMs). Thus there is no advantage to using double-sided SIMMs over the single-sided type.

A jumper is provided on the motherboard to indicate SIMM size.

SIMM Size	
J300	Size
2-3	1MB (or 2MB)
1-2	4MB (or 8MB)

<b>Commodore</b>			TITLE <b>FUNCTIONAL SPECIFICATION, A4000T</b>	
SIZE	DRAWING NUMBER	REV.	SCALE	SHEET 3 OF 23
	365276	A		

FAST RAM SIMM configurations usable with the A4000T are:

TOTAL FASTRAM	ADDRESS	SIMM CONFIGURATIONS
1 MB	07f00000-07fffff	1 1MB SIMM (S351)
2 MB	07c00000-07fffff	2 1MB SIMMs (S351, S352) 1 2MB SIMM (S351)
3 MB	07d00000-07fffff	3 1MB SIMMs (S351, S352, S353) 1 2MB SIMMs (S351) + 1 1MB SIMM (S353)
4 MB	07c00000-07fffff	4 1MB SIMMs (S351, S352, S353, S354) 2 1MB SIMMs (S351, S352) + 1 2MB SIMM (S353) 2 2MB SIMMs (S351, S353) 1 4MB SIMM (S351)
8 MB	07800000-07fffff	2 4MB SIMMs (S351, S352) 1 8MB SIMM (S351)
12 MB	07400000-07fffff	3 4MB SIMMs (S351, S352, S353) 1 8MB SIMM (S351) + 1 4MB SIMM (S353)
16 MB	07000000-07fffff	4 4MB SIMMs (S351, S352, S353, S354) 2 4MB SIMMs (S351, S352) + 1 8MB SIMM (S353) 2 8MB SIMMs (S351, S353)

Notes: SIMM slots must be populated in order from S351 to S354.  
Double-sided SIMMs (2MB or 8MB) are permitted to reside in slots 1 and 3 only.  
Only 1MB + 2MB, or 4MB + 8MB SIMMs may be mixed.

### 1.1.3 CHIP RAM

- 2 Megabytes
- 32 bit CPU interface
- 32/16 bit CHIP interface
- 80 nsecs

The base machine will contain 2 MB of CHIP RAM on the motherboard. The 2 MB of CHIPRAM appears at address \$0000000-01ffff.

### 1.1.4 ROM

Sockets are provided on the motherboard for two (128k x 16 or 256k x 16) ROMs. ROM appears at address \$0f80000-0ffffff and 0c00000-0c7ffff. A jumper is provided on the motherboard to adjust ROM speed. ROM jumper settings shall be as follows:

	CPU	
J151	cycles	Tacc
2-3	5	160 nsecs
1-2	6	200 nsecs

Writes to the ROM address range will cause a bus timeout to occur.

<b>Commodore</b>			TITLE FUNCTIONAL SPECIFICATION, A4000T	
SIZE	DRAWING NUMBER	REV.	SCALE	SHEET 4 OF 23
	365276	A		

### 1.3.1 SCSI CONTROLLER

- Built-in 16-bit SCSI-2 controller
- Supports 7 internal and/or external SCSI devices (disk module)
- Supports SCSI-2 FAST mode
- External switch for motherboard SCSI termination

The SCSI host controller utilizes the NCR53C710 SCSI host adaptor chip, which includes FIFOs for both SCSI and host bus interfaces. It has full MC68030/040 compatible bus-mastering capability for high-speed 32-bit transfers anywhere in the 32-bit Amiga memory map at rates up to 22 MB/s. The SCSI controller features full SCSI-2 support, configurations for internally and externally based SCSI devices, and dipswitch enable/disable of the mother board-based SCSI-2 active termination. The dip-switch is accessible at the A4000T rear panel on the disk module bracket.

The control registers for the NCR53C710 chip are 32 bits wide. The Gary chip asserts the cache inhibit line, CINH\*, for all 53C710 and all other I/O registers. The registers are read-only in the address range \$00DD040 to \$00DD007F and appear as write-only in the addresses \$00DD00C0 to \$00DD00FF.

The options register, which is read-only, occupies the lower byte of the longword at \$00DD0100. Bits 7-0 reflect the settings of board dipswitch SW200. Software can use these switches to set a SCSI host address and DMA user option setting. Bit 7 reflects the enable SCSI-2 active termination bit of the 8-position dipswitch.

Shown below is a table that gives addresses for all registers related to the SCSI sub-system.

	A13	A12	A8	A7	A6	Address	Function
SCSI	0	0	0	0	1	\$0DD0040	SCSI read only registers
	0	0	0	1	1	\$0DD00C0	SCSI write only registers
	0	0	1	X	1	\$0DD0100	SCSI ID registers
IDE	(10)	(10)	X	X	X	\$0DD1XXX	IDE registers decoded

Note that A6 must be high for all accesses. This is because contention with RAMSEY (\$00DD000C) results if this is not done.

SCSI hard disk drive P/Ns are: 364680 for 120 MB, 364825 for 240 MB, and 365363 for 535 MB.

<b>Commodore</b>			TITLE FUNCTIONAL SPECIFICATION, A4000T	
SIZE	DRAWING NUMBER	REV.	SCALE	SHEET 6 OF 23
	365276	A		

### 1.3.1.1 DIPSWITCH CONFIGURATION

The dipswitch configuration is as follows (default setting for all switches is OFF):

**Switches 1, 2, and 3 (SCSI address switches):** These switches determine the SCSI bus address for the SCSI controller. This should usually be set to device 7. Settings for switches 1, 2, and 3 establish SCSI addresses 0 through 7 as shown in Table I. Add-on SCSI devices must be set to a unique SCSI address other than the motherboard SCSI controller's address

**Switch 4 (SCSI fast bus switch):** This is set to OFF to enable the SCSI fast bus.

**Switch 5 (Short/long switch):** This is set to OFF to recognize that the system uses standard booting time.

**Switch 6 (synchronous mode switch):** This is set to OFF to indicate that the synchronous mode feature is enabled.

**Switch 7 (external SCSI termination switch):** When set to OFF, this indicates that no devices are installed. When set to ON, it indicates that external SCSI devices are installed. Then external termination must be set. The last SCSI device in the chain must be terminated per manufacturer's documentation and terminators on other devices must be removed or deactivated.

**Switch 8 (logical unit enable switch):** When set to OFF, this indicates that unit 0 is the only unit recognized. When set to ON, this enables the system to recognize units 1 through 6 as logical units (LUNs).

### 1.3.2 IDE CONTROLLER

- Built in 16 bit IDE interface (internal connections only)
- 2 drive support

An internal 40 pin connector is provided for the addition of up to two 16 bit AT IDE compatible hard disk drives.

The IDE (AT) hard drive requires two mutually exclusive chip selects. Refer to the following tables for address range in which each is active. The state machine shown (Figure 2) is used for IDE accesses. Note that consecutive accesses cannot be performed nearly as fast as a single access. This would suggest that the optimum algorithm for access of IDE data would consist of single accesses of IDE data interleaved with single accesses of the target/source data buffer.

Data register accesses can be performed faster than control register accesses. Accesses to the control registers are called "8 bit accesses" while those to the data register are called "16 bit accesses". Shown below is a table that gives addresses for all registers related to the IDE sub-system.

	A13	A12	A5	A1	Address	Function
SCSI	0	0	X	X	\$0DD0040	SCSI registers decoded
IDE	0	1	1	0	\$0DD1XX0	Reserved for mode register 0
	0	1	1	1	\$0DD1XX2	Reserved for mode register 1
	1	0	1	0	\$0DD2XX0	_CS1, 16 bit speed
	1	0	1	1	\$0DD2XX2	_CS1, 8 bit speed
	1	1	1	0	\$0DD3XX0	IDE interrupt register
	1	1	1	1	\$0DD3XX2	_CS2, 8 bit speed

Note that A5 must be high for all accesses. This is because contention with RAMSEY results if this is not done.

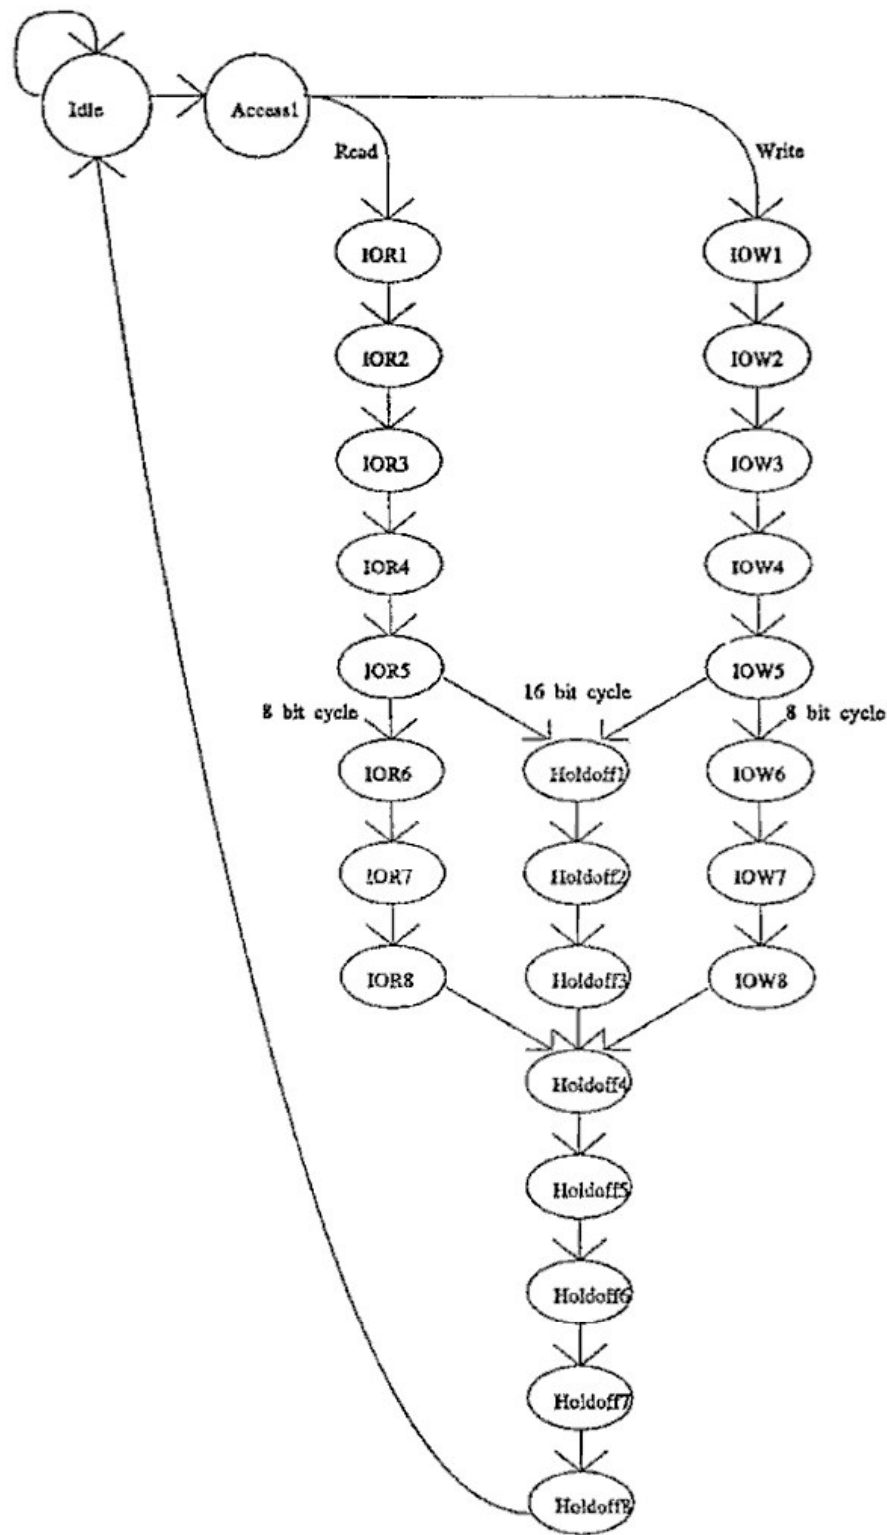

FIGURE 2  
STATE MACHINE

<b>Commodore</b>		TITLE		
		FUNCTIONAL SPECIFICATION, A4000T		
SIZE	DRAWING NUMBER	REV.	SCALE	SHEET 10 OF 23
	365276	A		

The disk drive address lines DA0, DA1, and DA2 are connected to processor address lines A2, A3, and A4 respectively. This results in the following memory map:

A1000 address	Addr on AT address	Valid Data	Read Function	Write Function
\$0DD1020	-	D31	None	Mode Reg0 (reserved)
\$0DD1022	-	D31	None	Mode Reg1 (reserved)
\$0DD3020	-	D31	IDE int reg	None
\$0DD303A	3F6	8 bits	Alternate Status	Device Control
\$0DD303E	3F7	8 bits	Drive address	Not used
\$0DD2026	1F1	8 bits	Error Register	Features
\$0DD202A	1F2	8 bits	Sector Count	Sector Count
\$0DD202E	1F3	8 bits	Sector Number	Sector Number
\$0DD2032	1F4	8 bits	Cylinder Low	Cylinder Low
\$0DD2036	1F5	8 bits	Cylinder High	Cylinder High
\$0DD203A	1F6	8 bits	Drive/Head	Drive/Head
\$0DD203E	1F7	8 bits	Status	Command
\$0DD2020	1F0	16 bits	Data	Data

Locations \$0DD1020 and \$0DD1022 are reserved for the mode registers. These are currently not implemented. When implemented, they will allow faster transfer rates from hard drives that support such rates. Part of the ID of a drive is information that allows the driver to decide which 'mode' is the fastest that the drive supports. Modes are defined as follows:

Mode Reg1	Mode Reg0	Mode type	Max. transfer rate
0	0	mode 0	3.3 MB/sec
0	1	mode 1	5.2 MB/sec
1	0	mode 2	8.3 MB/sec
1	1	Undefined	

As currently implemented, only mode 0 is available.

Location \$0DD3000 contains the IDE interrupt register. This register returns a value of 1 if an interrupt is pending from the IDE hard disk, and a value of 0 if an interrupt is not pending from this source. Writing to this register has no effect.

The A4000T supports four different timings for IDE drive access. They represent reads and writes at 8 and 16 bit transfer widths. These timings are shown in Figures 3 through 6

## 1.4 AUDIO

The A4000T includes an internal speaker. A mute switch and LED indicator for this speaker are mounted on the front panel.

Two external RCA jacks are provided for stereo audio output (pre-amp levels). Right and left channels are shorted together to provide combined monaural audio if only a single RCA plug is installed. Separate right and left stereo is provided when male RCA plugs are inserted into the BOTH of the RCA jacks.

A stereo headphone jack, with sound processed separately, is also provided. It is located above the RCA jacks on the audio/video module bracket.

External audio IN is provided on pin 18 of the RS232 DB25 connector. This audio is mixed into the right channel. Audio OUT is also provided on the DB25 connector on pin 11, which is sent from the left audio channel.

An internal connector on the PCB allows for additional Right and Left audio to be mixed in. This allows internal expansion devices (such as a CD/DSP) to provide stereo audio as well.

## 1.5 KEYBOARD

A full size detachable keyboard with a keypad is used (P/N 365374-01 through -99). This is the same keyboard as is used with the A4000 with one modification: The A4000T uses a 5-pin DIN connector (as is used on the A3000/A3000T).

## 1.6 MOUSE

A high-resolution (400 DPI) two-button mouse (P/N 313254-03 or -04), as used on the A3000T, is provided.

## 1.7 EXPANSION SLOTS

The A4000T includes the following expansion slots (refer to Figure 7):

- 5 ZORRO II/III expansion card slots
- 2 video slots in line with 2 ZORRO slots
- 3 PC/AT slots in line with three of the Zorro slots
- 1 additional PC/AT-only slot
- 200 pin processor connector

Five expansion card slots are provided. The two top slots contain a 100 pin ZORRO II/III compatible connector in line with the two 2-connector video slots. The remaining three slots have both ZORRO II/III and IBM PC/AT connectors. A PC/AT-only slot is also provided on the bottom.

Video cards that were designed for the A2000 have certain limitations in this casework. In the A3000 we provided an adapter bracket that allowed boards designed for the A2000 video slot to be used in the A3000. It attached to the large flat metal bracket on the video card. This allowed it to be connected to a standard expansion slot opening. In the A4000T, however, there is not enough room for the old bracket to remain (it sticks out the side of the box). Consequently, the old video slot bracket must be removed from the video card, and a new 'custom' bracket installed. This bracket is custom to each video card, and must be provided by each of the separate manufacturers since the location of the mounting holes is not standard.

<b>Commodore</b>			TITLE <b>FUNCTIONAL SPECIFICATION, A4000T</b>	
SIZE	DRAWING NUMBER	REV.	SCALE	SHEET 16 OF 23
	365276	A		

A 200 pin KEL connector is provided on the motherboard which provides direct access to the processor bus signals. This connector is physically and electrically compatible with the coprocessor slot of the A3000 and A4000. Since no processor exists on the motherboard of the A4000T, this processor slot must be occupied by a CPU card for the machine to function. However, different CPU cards can be plugged into this slot in order to alter or enhance the system (such as future processors, or coprocessors).

## 1.9 ASICs

All ASICs are provided in PLCC packages for surface mounting.

### 1.9.1 FATRAMSEY

RAMSEY is the FASTRAM controller that was designed for the A3000. Refer to Fat Ramsey specification 390541.

### 1.9.2 FATGARY

FAT GARY is a large 'glue' chip designed for the A3000 which performs a variety of tasks. Refer to Fat Gary specification 390540.

### 1.9.3 BUSTER

BUSTER is responsible for bus control and arbitration. It can be used in the same fashion as in the A3000, and does not require any additional logic. Refer to Buster specification 390539.

### 1.9.4 BRIDGET

Bridget is a Gate Array (also used in the A4000) which replaces the following TTL chips: six 74F646's and four 74F245's. This results in reduced cost, reduced real estate and easier routing. BRIDGET can be used unchanged from the A3000 and other ECS/AA designs. BRIDGET was created with NCR's technology and processing. This was necessary for two reasons: pin count and speed. Refer to Bridget specification 391380.

### 1.9.5 PAULA

PAULA performs several functions such as 8 bit audio with four voices configured as two stereo channels, floppy disk I/O, RS-232 serial I/O, potentiometer, and interrupt controls.

### 1.9.6 ALICE

ALICE is the main Amiga Chip bus controller.

### 1.9.7 LISA

LISA provides 32 bit chip interface and improves video color depth and video output to 24 bits of digital RGB video.

TITLE

FUNCTIONAL SPECIFICATION, A4000T

SIZE	DRAWING NUMBER	REV.	SCALE	SHEET 19 OF 23
	365276	A		

## 2.0 PHYSICAL REQUIREMENTS

### 2.1 CASEWORK

The casework used for standard PC compatible towers is used with a custom front bezel with a door. 3.5"-to-5.25" adaptor brackets are provided for the floppy and hard disk drives. These include snap-in slider fixtures on the sides for mounting and locking in the drive bays.

Height: 535.7 mm

Depth: 520 mm

Width: 178.5 mm

Weight: 35 lbs.

Feet: Clamp-on feet are provided for the A4000T. The feet are 270 mm wide and shall not raise the casework more than 20 mm.

Refer to Commodore drawing No. 365318-01 for details of casework and components.

### 2.2 CONTROLS AND INDICATORS

The following controls and indicators are located on the front bezel:

(Markings shall comply with international ergonomic standards. No LED shall be red.)

Security keylock

Switches :            Power ON  
                          Reset  
                          Speaker mute

Indicators (LEDs):    Power ON  
                          HDD accessing  
                          Speaker mute (LED off when mute)

### 2.3 COLORS

Casework shall be Commodore Limestone Beige (363744-01) except that plastic components, such as the bezel, door, and feet, shall be Commodore Clay Beige (363744-02).

### 2.4 MARKINGS

A4000T machines shall be marked with an A4000T Amiga logo on the bezel.

#### 2.4.1 RATING LABEL

The A4000T shall carry a label showing power rating and regulatory agency compliance.

<b>Commodore</b>			TITLE <b>FUNCTIONAL SPECIFICATION, A4000T</b>	
SIZE	DRAWING NUMBER  365276	REV. A	SCALE	SHEET 20 OF 23

## 2.5 MATERIALS

Casework shall be made of sheet steel except for the bezel, door, and feet, which shall be made of U.L. rated (94 V-0) plastics. All plastic parts shall have standard recycling symbol.

### 2.5.1 HAZARDOUS MATERIALS

No components containing poly-chlorinated byphenyl (PCB) or polybromide shall be used in the A4000T. Any batteries used in the A4000T shall a standard recycling symbol on their exterior.

## 3.0 POWER SUPPLY

A power supply is required to meet the shape requirements of the case. Refer to Commodore specification 391699 for power supply details.

### 3.1 INPUT REQUIREMENTS

Input voltage range:	90 to 132 VAC rms (select switch set at 115 V) 180 to 264 VAC rms (select switch set at 230 V) (selectable by external switch)
Input frequency:	47 to 63 Hz
Input current:	6 amps max. @ 115 VAC (involve 1 amp AC output) 3 amps max. @ 230 VAC (involve 0.5 amp AC output)
Inrush current:	40 amps (peak) maximum @ 115 V 80 amps (peak) maximum @ 230 V (at cold start in 25 °C ambient)
Efficiency:	68% minimum @ full load

### 3.2 DC OUTPUT REQUIREMENTS

Maximum continuous output power: 250 watts

OUTPUT	+5V	+12V	- 5V	- 12V
Max. load	25.0A	10.0A	0.3 A	0.3 A
Min. load	5.0A	1.0	0 A	0 A
Regulation	+5/- 4%	+5/- 4%	+10/-10%	+10/-9%
Max. voltage	5.25V	12.6V	-5.5V	-13.20V
Min. voltage	4.80V	11.52V	4.5V	-10.92V
Ripple & noise (Max. p-p)	80 mV	120mV	150mV	150mV
Ripple (Max. p-p)	60 mV	80mV	80mV	100mV

### 3.3 OVERLOAD PROTECTION

The power supply will shut down if significantly more than the rated current is drawn from any of the voltages. Therefore, user voltages available at some of the external connectors are protected. However, since up to 25 amps is available at +5 V, the +5 V current at external connectors is limited by a polyswitch 'fuse'. The polyswitches act like circuit breakers that open up when their maximum rating is exceeded. They automatically reset when the load is removed (after cooling off, which may take 30 seconds or more). A separate polyswitch limits current to the SCSI-2 connectors.

### 3.4 NO-LOAD OPERATION

Potentially hazardous or damaging conditions shall be prevented even when AC output voltage is applied with no load on any output.

### 3.5 AC OUTPUT

For monitor input, the AC output voltage is controlled by the main power switch and is the same as the AC input voltage.

AC 115V output: 1 amp max.  
AC 230V output: 0.5 amp max.

The 50/60 Hz TICK signal used in some Amigas has been generated in the power supply. In the A4000T power supply, the 8520 counter is connected to the Vertical Sync signal for this purpose (as in the A500).

### 3.6 POWER SUPPLY CONNECTIONS

	CONNECTOR	OUTPUT	WIRE COLOR	WIRE SIZE (AWG)	CURRENT (MAX.)
POWER	P8-1	Power Good	ORN	18

#### 4.0 REGULATORY REQUIREMENTS

The A4000T complies with the following regulatory agency requirements

USA: UL 478Rev 4/1950 (Electronic Data Processing Units and Systems/ Information Technology Equipment)

FCC CFR47 Part 15 Class B

Canada: CSA 22.2 (Data Processing Equipment, Consumer and Commercial Products)  
Canadian DOC Class B

Europe: EN 55022 (EMI) EN60950 (safety)

#### 5.0 ENVIRONMENTAL REQUIREMENTS

Units furnished to the requirements of this specification shall meet the following environmental resistance requirements, per Commodore Engineering Policy #1.02.010, Product Environmental Requirements. Vendors shall furnish supporting documentation upon request. Units shall meet all requirements of this specification after the tests listed here. The list presented here is a summary of some of the requirements.

Operating Temperature	5 ° to 40 ° C
Operating Humidity	10 to 90% RH non-condensing
Operating Altitude	0 to 3000 meters
Storage Temperature	- 20 ° to + 70 ° C
Storage Humidity	5 to 95% RH non-condensing
Storage Altitude	0 to 15,000 meters
Storage Shock	20 g's - 11 msec - 1/2 sine wave, two shocks in each of six directions
Storage vibration	Sinusoidal sweep, 1.5 mm full amplitude, 12 minute sweep rate for 10 - 500 - 10 Hz, 2 hours in each axis

#### 5.1 TRANSIT REQUIREMENTS (non-operating/packaged)

Transportation simulation: Per NSTA Pre-shipment Test Procedure Project 1A (0.5mm displacement peak-to-peak at 2-55-2 Hz in each of three mutually perpendicular planes for 7 minutes per cycle for a duration of 30 minutes)

Drop test: Per NSTA Standard (30-inch drops: on one corner and three edges radiating from that corner, and on all faces of the box)

#### 6.0 MINIMUM ACCEPTANCE LEVEL

The minimum acceptance level for any lot will be an AQL of 0.65 as defined by MIL-STD 105 single sampling techniques.

#### 7.0 ENGINEERING CHANGES

Any changes to form, fit, or function shall be made via the formal ECR process.
