NEW PLASMA AND LCD INTRODUCTION

BULLETIN #05-0550

Page Two

<FWD50PX2>

Available in Black and Silver finish

The FWD-50PX2 is a 50-inch High Definition Professional Display, well suited for corporate and consumer applications. The display provides a versatile platform including analog and digital inputs for both video and PC devices.

We will continue to carry the FWD50PX1/B, FWD50PX1/S and FWD50PX1/W while supplies last for those customers who prefer the crystal coated bezel and the unique Pearl White color option.

Features and

Benefits:

Panel Quality

The display has a long-life panel **60,000 hours** to half brightness, and **10,000:1** contrast ratio performance. Combined with a panel capable of **1.07 Billion colors**, the result is a life-like image with rich color reproduction for home theater applications.

The 1366 x 768 native resolution is capable of delivering HD performance in an elegant flat display design. The display is capable of handling various input timings and sources, including Video and PC timings for use with up to 1080i video or 1600x1200 PC timing.

Flexible Inputs

The display comes ready to work with a wide array of video devices or PC applications. Inputs include support for analog and digital HD video (using Component to HD15 cable, or DVI-D Cable with HDMI to DVI-HDCP), as well as PC input, using HD15 (RGB/YUV) or **DVI-HDCP** inputs.

This display is also capable of using compatible Sony expansion cards for additional inputs or networking control. The display has two available card slots, with one populated with a Composite (BNC) / S-Video input card with shared L/R audio input.

NEW PLASMA AND LCD INTRODUCTION

BULLETIN #05-0550

Page Three

Features and

Benefits:

Additional Features

The display supports **Picture-In-Picture** as well as **Picture-and-Picture** features for flexible multi-tasking

A new user-selected **screen saver feature** adds a signal monitor that identifies a static image on the screen that can cause permanent image retention. If the display senses this static video image for several minutes, it will automatically dim the display brightness to reduce the potential effect of permanent image retention. (results may vary, and this is not a guarantee of preventing permanent image retention)

Discrete IR Codes are available for use with installations where control systems are used with the Control-S (In/Out) or front IR sensor. In addition, users may select from the Onscreen Display (OSD) a setting to fix the input to maintain its current setting.

RS232C port and serial control available for advanced installations.

Included accessories make a difference for easy installations, which is why Sony includes a **3 meter Component (Y/Pb/Pr) to HD15 cable** for connecting Digital Cable or Satellite receivers. Also included is a **DVI-D cable** for versatile digital connections.

Clean back panel for **clean cable management**.

Automatic Video Wall Set Up Mode for up to 16 panels.

<FWD32LX1R>

Available with an elegant crystal coated bezel, in Pearl White, Frosted Black and Crystal Silver.

The FWD-32LX1R is a 32-inch High Definition LCD Display, well suited for hotel guestrooms, small signage applications and education.

The current FWD32LX1 will discontinue as soon as inventory is depleted.

Features and Benefits:

Panel Quality

Phenomenal picture performance - High brightness, superior contrast (1000:1) and fast video response time combine to deliver crisp, clear text and smooth motion images for video applications. This display is utilizing the latest Sony LCD panel technology, along with the WEGA Engine™ technology to deliver remarkable resolution and image clarity.

The 1366 x 768 native resolution is capable of delivering HD performance in an elegant crystal display design. The display is capable of handling various input timings and sources, including Video and PC timings for use with up to 1080i video or 1600x1200 PC timing.

Flexible Inputs

The display comes ready to work with a wide array of video devices or PC applications. Inputs include support for analog and digital HD video (using Component to HD15 cable, or DVI-D Cable with HDMI to DVI-HDCP), as well as PC input, using HD15 (RGB/YUV) or **DVI-HDCP** inputs.

This display is also capable of using compatible Sony expansion cards for additional inputs or networking control such as the new BKMF50 digital signage card. The display has one open card slot, with one populated with a Composite (BNC) / S-Video input card with shared L/R audio input.
