

Video Products Technical Bulletin 30-2002-115

DATE: **July 22, 2002**

SUBJECT: **SHIFT OF VERTICAL HOLD**

MODEL: **SSM-724AMR**

SERIAL NO: **414,165-414,244**

DESCRIPTION

To correct a picture roll (unlocked vertical synchronization), perform the following modification procedure.

MODIFICATION PROCEDURE

1. Open the cabinet.
2. Feed a CCIR (625) signal.
3. On the A Board, Side A (See Figure 1), adjust RV501 (V HOLD) until the picture is steady.

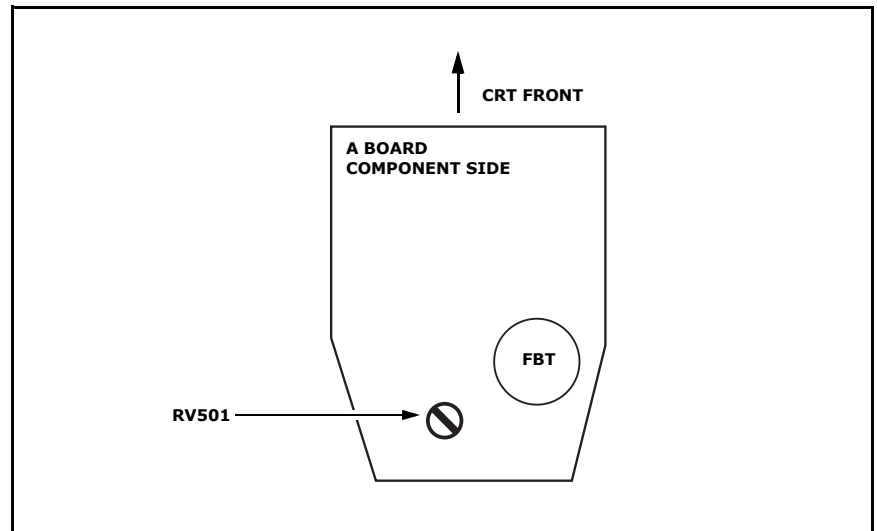

Figure 1

4. Continuing to adjust RV501, find the range in which the vertical hold is steady, and set RV501 to the center of this range.
5. Close the cabinet.
